HLH Walls Works Expanding Dealer Network Worldwide

HLH Walls has begun a major campaign to attract new Dealers for their proprietary lines of sound mitigation walls. The firm intends to have 50 additional Dealers within 6 to 12 months.

NEWS RELEASE – FOR IMMEDIATE RELEASE

LISLE, IL February 10th, 2010 - Officials for Harder Luckey & Hargrave (HLH Walls) announced today that they have initiated a major marketing campaign targeted at attracting new Authorized Dealers for its proprietary lines of sound mitigation walls. The firm has been aggressively expanding its worldwide footprint and is seeking fence dealers, construction firms, as well as architects, contractors, and acoustical engineers who would be well suited to add additional product lines to their already established business. HLH Walls already sells its sound mitigation walls through its in-house sales department as through its existing worldwide Dealer network.

HLH Walls a privately owned and operated business has enjoyed local and national recognition several times as a provider of maintenance free sound mitigation wall alternatives over the years and anticipates continued substantial growth.

“Authorized Dealers offer all of our company’s proprietary product lines including its flagship and highest quality product line of the Tuf-Barrier™, Silent Protector™, and the Silent Protector Plus™ noise wall systems,” said Mike Young, Director of Business Development. “Our product line has been installed in several high visibility projects now and has enjoyed excellent reviews.”

Company Profile

HLW Walls is the sole manufacturer of the Tuf-Barrier™, Silent Protector™, and the Silent Protector Plus™ noise wall systems: an industry leader in maintenance free alternatives in the sound mitigation wall industry. With corporate offices in the United States and Canada, HLH Walls sells its unique products worldwide through a network of affiliated dealers. The Tuf-Barrier™, Silent Protector™ and Silent Protector Plus™ sound barrier systems meet or exceed AASHTO guidelines for key mass requirements, wind loads and decibel reduction criteria.
